

Building on early success, Scripps extends Storm Shield's appeal to the Android platform

September 6, 2012

Popular emergency weather app now available to millions of additional mobile devices

CINCINNATI, Sept. 6, 2012 /PRNewswire via COMTEX/ --Fast on the heels of a devastating hurricane and just in time for [National Preparedness Month](#), The E.W. Scripps Company (NYSE: SSP) announced today that its popular **Storm Shield** app, a comprehensive and customizable weather product made specifically for mobile media consumers, now is available to users of Android-powered devices.

Downloadable to Apple- and Android-powered tablets and smartphones for only \$4.99, Storm Shield delivers completely customizable weather alerts in up to five locations, as well as a 'follow-me' option. Once users choose their preferred locations and the types of weather events of most concern to them, the app pushes a text alert along with the National Oceanographic and Atmospheric Administration audible message right to their phone in time to take action. In other words, smartphone owners no longer have to depend on an analog weather radio for timely and potentially life-saving information.

Storm Shield consistently has been one of the most-popular paid weather apps since its recent launch. It kept thousands of people ahead of the storm when Hurricane Isaac approached the Gulf Coast last month.

To download the app to an Android-powered device, users should search for Storm Shield in the Google Play store.

Storm Shield has caught the attention of such trusted outlets as [CNET](#) (4 out of 5 stars, "a detail-rich app for weather bugs, with an emphasis on smart, active, automatic alerts for severe weather ...its ability to pinpoint data to your location could literally be a life-saver") and [The Unofficial Apple Weblog](#) ("Storm Shield is like having a sophisticated weather radio on your iPhone").

It also has won the applause of customers who have submitted feedback such as, "During the roughest part of the storm I was constantly getting push messages to my iPhone and iPad. Thanks for developing this amazing app!" and "I love this app because it finds your location. GREAT APP! Someone did what was needed, well worth the small price of it!" Click on "testimonials" [here](#) for more.

The app was developed in conjunction with Norman, Okla.-based Weather Decision Technologies. Because the reliability of this service is so crucial, the Storm Shield alerting infrastructure is being hosted in a secure center designed to withstand the winds of the most severe (EF-5) tornadoes.
